Petroleum to Pollinators Project

the town of Oxford is designing a pollinator park for you and the pollinators to enjoy!

Pollinators

Pollinators are animals like bees, butterflies, birds, and even bats that help move pollen from one flower to another flower so plants can make seeds and grow new plants!

Did you know?

- A single bee can visit up to 5,000 flowers in one day!
- Butterflies taste with their feet to find the best flowers
- Hummingbirds love bright-colored flowers

Also...

Pollinators help grow the food we eat! Without pollinators, we wouldn't have foods like apples, blueberries, and chocolate!

You can help!

Planting a pollinator garden with native flowers helps bees, butterflies, and other pollinators stay healthy and happy!
